EAI Project No. 1576

Ann Lin  
California Regional Water Quality Control Board  
Los Angeles Region  
320 W. 4<sup>th</sup> Street, Suite 200  
Los Angeles, CA 90013

**SUBJECT: SUPPLEMENTAL SITE ASSESSMENT AND FIRST QUARTER 2010  
GROUND WATER MONITORING REPORT  
11630 - 11700 Burke Street, Santa Fe Springs, CA 90670  
(RWQCB SCP Case No. 1238)**

Dear Ms. Lin:

Enclosed herewith for your review is a copy of the Environmental Audit, Inc. report for the above referenced site titled "*Supplemental Site Assessment and First Quarter 2010 Ground Water Monitoring Report*," dated February 1, 2010. Please call me at (714) 632-8521, ext. 226 or Steven Bright at ext. 224 if you have any questions or need additional information.

Sincerely,

ENVIRONMENTAL AUDIT, INC.

Brent H. Mecham, RG, REA II.  
Project Manager

## 1.0 INTRODUCTION

This document constitutes a Supplemental Site Assessment and First Quarter 2010 Ground Water Monitoring Report for the real property identified as 11630 - 11700 Burke Street, Santa Fe Springs, Los Angeles County, California 90670 (Site) (see Figure 1). EAI was retained by Mr. Larry Patsouras, the property owner, to prepare this report.

Assessment and remediation efforts associated with the Site are currently being overseen by the California Regional Water Quality Control Board, Los Angeles Region (RWQCB). Mrs. Ann Lin is the RWQCB Case Manager assigned to the Site and the Site Cleanup Program Case Number is 1238.

The Site, approximately 8.5 acres, is identified by the County of Los Angeles as Assessor's Parcel Number 8168-001-008. For reporting purposes, the Site has been divided into the "East Parcel" where Mr. Patsouras operates El Greco, a wholesale grocery warehouse, and the "West Parcel" where Talco Plastics formerly operated until 1997 (see Figure 2). All of the former Talco Plastics facilities, except an office building, were removed from the West Parcel of the Site pursuant to permits issued by the City of Santa Fe Springs.

### 1.1 SCOPE OF WORK

EAI's reports for the Site titled "*Summary of Site Assessments, Soil Gas Survey, Human Health Screening Evaluation, and Work Plan*," dated March 2009 and "*Well Installation (MW-3 and MW-4) and Third Quarter 2009 Ground Water Monitoring Report*," dated August 24, 2009 provide specifics on historical and current land use for the Site, surrounding land use, local and regional geology and hydrogeology, subsurface units removed, prior media sampling and testing results, i.e., soil, soil gas, and ground water, prior remediation efforts completed, etc.

On October 22, 2009, the RWQCB issued a letter requesting additional media sampling and testing for the Site. On November 3, 2009, a meeting was held at the RWQCB office to discuss the additional work being requested. On November 4, 2009, EAI submitted a "*Supplemental Site Assessment Work Plan*," and based on comments received from the RWQCB submitted a "*Revised Supplemental Site Assessment Work Plan*," dated November 5, 2009.

On November 24, 2009, the RWQCB issued a letter approving the Work Plan, with modifications. The scope of the work approved by the RWQCB and implemented as part of this investigation consists of:

- **East Parcel**
  - Drilling out existing ground water monitoring well MW-1, and installing a new well at the same location (identified as well MW-1D) to a depth of 80 feet below ground surface (bgs). Soil samples were collected at depths of 60, 65 and 70 feet bgs for analytical testing. *Note, the laboratory reports and well elevation survey data identify well MW-1D as well MW-1A, i.e., MW-1D and MW-1A are the same well.*

- Drilling three 70-foot deep borings identified as SAMPLE-4A, B-7A and E-9A. Soil samples were collected from each boring at depths of 5, 10, 15, 20, 25, 30, 35, 40, 45, 50, 55, 60, 65 and 70 feet bgs for analytical testing.
- Analytical testing of each soil sample for total petroleum hydrocarbons (TPH) carbon chain breakdown, i.e., TPH as gasoline (TPH-G), diesel (TPH-D) and oil (TPH-O) using modified EPA Method 8015, and volatile organic compounds (VOCs) using EPA Method 8260B.

- **West Parcel**

- Drilling four 70-foot deep borings identified as B-2, B-3, C-3 and D-4. Soil samples were collected from each boring at depths of 5, 10, 15, 20, 25, 30, 35, 40, 45, 50, 55, 60, 65 and 70 feet bgs for analytical testing. Each soil samples was analyzed for VOCs using EPA Method 8260B.

First Quarter 2010 ground water monitoring was also completed.

Figures 3, 4, 5 and 6 depict the media sampling locations and Tables 1 through 7 summarize soil, soil gas and ground water testing results. Note, these figures and tables include the historical data and those from completing this investigation. Figure 7 is an isoconcentration map for tetrachloroethene (PCE) detected in soil gas at 5 feet bgs, and Figure 8 for PCE detected in soil gas 15 feet bgs.

## **2.0 SAMPLING ACTIVITIES AND RESULTS**

All media sampling activities were completed in accordance with the requirements outlined in the EAI Health and Safety Plan for the Site.

### **2.1 UNDERGROUND SERVICE ALERT**

Prior to initiating sampling activities, sampling locations were marked on the ground surface and Underground Service Alert (USA) was notified. USA issued Ticket No. A93141479 for this project.

### **2.2 WELL PERMIT**

The Los Angeles County Department of Public Works, Water Quality Program, Environmental Health Division issued Permit Number 890007 for installation of ground water well MW-1D (see Appendix A).

### **2.3 DRILLING AND SOIL SAMPLING**

On December 7 and 8, 2009, borings SAMPLE-4A, B-7A, E-9A, B-2, B-3, C-3, D-4, and well MW-1D were drilled and sampled at the Site (see Figures 3 and 4). The borings were drilled by Cascade Drilling of La Habra, California (License No. 938110; C-57 Water Well Drilling), under the supervision of an EAI California registered geologist. The borings were drilled using 8-inch outside diameter continuous flight hollow stem augers to depths of 70 feet bgs. The well was drilled to a depth of 80 feet bgs. All borings were logged in accordance with the Unified Soil Classification System (see Appendix B).

Soil samples were collected using three 1.5-inch diameter by six-inch long stainless steel tubes mounted within a 1.5-inch inside diameter split-spoon drive sampler employed in advance of the augers. EnCore samplers were used at each sampling location to collect soil samples from the lowermost six-inch long tube for VOC testing. Additionally, the lower most tube at each sample point for borings SAMPLE-4A, B-7A, E-9A, and MW-1A was also delivered to the laboratory for TPH-G, TPH-D, and TPH-O testing.

A Mini Rac Photo-Ionization Detector (PID) calibrated against an isobutylene gas standard was used on the soil contained in the second tube from the bottom of the shoe, at each sampling interval within the borings, to determine if volatile hydrocarbon vapors were emanating directly from the soil. Each sample was placed in an air tight "Ziploc" plastic bag. The soil samples were allowed to sit in the bags for a minimum of five minutes and then the headspace in the bags was analyzed using the PID. The results of this field testing are recorded on the boring logs (see Appendix B).

## **2.4 WELL INSTALLATION**

Well MW-1D was installed at the same location as well MW-1 by over drilling and removing all well casing and seal materials associated with MW-1, and advancing the boring to 80 feet bgs. Well MW-1D was constructed of 2-inch Schedule 40 PVC well casing with a slotted section extending from 60 to 80 feet bgs. The annular space between the borehole wall and well casing was backfilled with Monterey sand (#3) to about two feet above the slotted section. A three foot thick layer of hydrated bentonite was placed on top of the sand pack and the remaining annular space grouted to the surface using hydrated bentonite. A flush mounted traffic grate was placed on the well (see Table 8 and Appendix C).

## **2.5 WELL DEVELOPMENT**

Well MW-1D was allowed to sit for three days after construction, prior to development. On December 10, 2009, well MW-1D was developed until the water is relatively free of settleable solids.

## **2.6 WELL ELEVATION SURVEY**

On December 11, 2009, well MW-1D was surveyed pursuant to the requirements of GeoTracker by Evans Land Surveying and Mapping (see Appendix D).

## **2.7 QUARTERLY GROUND WATER SAMPLING**

On January 4, 2010, prior to initiating any purging or sampling activities, depth measurements to fluid levels were obtained using an interface probe accurate to 0.01 foot (see Table 4). Prior to collecting ground water samples for analytical testing, wells MW-1D and MW-4 were purged of approximately three well casing volumes of water. Well MW-2 was dry and well MW-3 contained water only in the end cap. Therefore, wells MW-2 and MW-3 were not sampled.

Prior to sampling, the wells were purged using a Grundfos MP-1 submersible pump. Temperature, conductivity, turbidity and pH readings were recorded during purging activities (see Appendix E). Ground water samples were collected from just below the water surface using disposable bottom bailers equipped with VOC sampling tips. The samples were sealed in 40-milliliter volatile organic analysis (VOA) vials with Teflon septa lined lids, one-liter amber glass jar and one 500-milliliter plastic jar. Each vial was completely filled so that no headspace existed between the sample and the lid.

## **2.8 SAMPLE IDENTIFICATION, DOCUMENTATION, PACKAGING AND SHIPPING**

To identify and manage the samples collected in the field, a sample label was affixed to each sample container. Each sample label included the following information:

- Sample identification number

- Date and time of sample collection
- EAI project number
- Name of client
- Name of sampler

Following sample collection and labeling, the soil and ground water samples were placed into a high quality ice chest for temporary storage and transport to EAI's office. The following protocol was used for sample packaging:

- A self-adhesive sample label was placed across the lid of each sample container, acting not only as a sample label but also as a custody seal.
- The samples were placed in leak-proof "Ziploc" plastic bags.
- The samples were then placed into a high quality ice chest which included ice to keep the samples chilled during transport. The drain plug of the ice chest was secured using tape to preclude melting ice from leaking out of the cooler.
- The chain of custody record (COC) forms were placed in a "Ziploc" plastic bag and taped to the inside lid of the cooler.
- The samples were kept chilled in an EAI refrigerator until picked up by the laboratory for analytical testing.

COC record forms (see Appendix F) were used to document sample collection and shipment to the laboratory for analytical testing. The COC record form identifies the contents of each shipment, the analytical testing to be completed on each sample, and maintains the custodial integrity of the samples.

## 2.9 DECONTAMINATION PROCEDURES

The augers were steam cleaned between each boring. The equipment used to collect the soil samples was decontaminated prior to each sampling, to assure the quality of the samples collected. The sampling equipment was decontaminated using the following procedure: all excess soil was scrapped off the sampler; the sampler was washed in a solution of non-phosphate detergent (Alconox) and tap water; and the sampler was rinsed with tap water.

The submersible pump and hose (equipment) used to develop and purge the wells prior to sampling was decontaminated using the following procedure: the equipment was washed in a solution of non-phosphate detergent (Alconox) and tap water; and the equipment was rinsed with tap water.

## 2.10 MANAGEMENT OF WASTES

In the process of collecting media samples during the field-sampling program, potentially contaminated investigation-derived wastes (IDW) were generated. These wastes include spent personal protective equipment (PPE), soil cuttings, and decontamination and well development/purging fluids. Spent PPE, e.g., gloves, were double bagged and placed in a municipal refuse dumpster.

Soil cuttings were stockpiled on-site. The liquid effluent generated from decontaminating sampling equipment and developing the ground water wells was sealed in labeled 55-gallon drums. The drums remained on-site, pending the results of the analytical testing, at which time an appropriate disposal method was determined.

## 2.11 ANALYTICAL PROGRAM AND RESULTS

All samples were delivered to Enviro-Chem, Inc. (ECI), a State of California certified hazardous waste testing laboratory (ELAP Certification No. 1555), for analysis. The analytical methods utilized are:

Media	Chemical	EPA Method
Soil	TPH-G, TPH-D, TPH-O	8015M
	VOCs	8260B
Ground Water	TPH-G, TPH-D	8015M
	VOCs	8260B
	Total Chromium	200.7
	Hexavalent Chromium	218.6

Appendix F contains the COC record forms and laboratory reports.

### 2.11.1 Soil Samples

#### West Parcel

Borings B-2, B-3, C-3 and D-4 (see Figure 4) were drilled on the West Parcel to 70 feet bgs at locations where the highest soil gas concentrations were detected (see Table 6, and Figures 7 and 8). EAI had previously concluded that the VOCs detected in soil gas were the result of off-gassing from ground water, and not from any source on the West Parcel.

Each soil sample was analyzed for VOCs. No VOCs were detected in the 56 soil samples analyzed (see Table 1).

#### East Parcel

Borings SAMPLE-4A, B-7A, E-9A and MW-1D were drilled on the East Parcel (see Figure 3) to provide information on the lateral and vertical extent of hydrocarbons detected in previous soil

samples collected from this area. Borings SAMPLE-4A, B-7A and E-9A were drilled to 70 feet bgs, while well MW-1D was drilled to 80 feet bgs.

Each soil sample (45 in total) was analyzed for TPH-G, TPH-D, TPH-O and VOCs (see Table 1).

TPH-G was not detected in any of the soil samples analyzed. TPH-D and TPH-O were detected in four samples, i.e., B-7A at 5, 10 and 20 feet bgs, and SAMPLE 4A at 5 feet bgs. TPH-D was detected at concentrations ranging between 14.4 mg/kg and 16,800 mg/kg, and TPH-O between 65.1 mg/kg and 48,300 mg/kg. The laboratory report indicates that the TPH-D peaks are in the diesel range, but do not match the diesel standard, i.e., probably a light end of a heavier compound.

Three VOCs (toluene, PCE and 1,2,4-trimethylbenzene [1,2,4-TMB]) were detected in two of the 45 soil samples, all from sampling location B-7A. Toluene (1.07 mg/kg) and 1,2,4-TMB (1.6 mg/kg) were detected in the soil sample collected from boring B-7A at 10 feet bgs, and PCE (0.043 mg/kg) in the soil sample collected from boring B-7A at 20 feet bgs.

No VOCs were detected in the soil samples collected from borings SAMPLE-4A, E-9A and MW-1D (see Table 1).

#### **2.11.2 Ground Water Samples**

No TPH-G or TPH-D were detected in the ground water samples. Chloroform, carbon tetrachloride, PCE and TCE were the VOCs detected in ground water. Chloroform concentrations ranged from 1.74 ug/L to 13.3 ug/L, carbon tetrachloride from 1.15 ug/L to 10.5 ug/L, PCE from 6.07 to 20.4 ug/L, and TCE from 3.86 to 4.95 ug/L (see Table 4).

Chromium was not detected in ground water, and hexavalent chromium was detected at concentrations ranging between 0.0036 mg/L and 0.0037 mg/L (see Table 5).

### 3.0 DISCUSSION/CONCLUSIONS AND RECOMMENDATIONS

Numerous assessments have been completed over the years (1994 to present) by various firms to identify chemicals in soil gas, soil and ground water beneath the Site. In EAI's opinion, collectively, these investigations have adequately characterized the Site.

Figure 9 is a Conceptual Site Model for the property.

#### 3.1 DISCUSSION/CONCLUSIONS

##### 3.1.1 Off-Site Impacted Properties

There are two properties adjacent to the Site that are known to be impacted, i.e., Pilot Chemical Company located at 11756 Burke Street and Phibro-Tech, Inc. located at 8851 Dice Road, as well as regional contamination identified for the area by the Water Replenishment District of Southern California (WRD) (see WRD, 2007).

##### Pilot Chemical Company

This property is about 4.3 acres in size, located immediately east of the Site across the railroad tracks, and was used to manufacture detergent for industrial purposes. Pilot Chemical Company is an active case being overseen by the RWQCB, Mr. Henry Jones is the Case Manager, and the matter is identified as Case No. 0383, Site ID No. 2041500. Chemicals of concern include both petroleum and chlorinated hydrocarbons (see PPE, 2008).

Well locations and ground water quality data for the Pilot Chemical Company Site are provided in Section 3.1.5.

##### Phibro-Tech, Inc.

This property is about 4.8 acres in size, located immediately east-southeast of the Site across the railroad tracks, and receives various hazardous aqueous wastes and recyclable materials primarily from the electronic and aerospace industries and treats these substances to create usable new products. Phibro-Tech, Inc. is an active case being overseen by DTSC and Ms. Kathy San Miguel of the DTSC Cypress Office is the Case Manager.

Ground water monitoring was initiated at the Phibro-Tech, Inc. site over 20 years ago and continues as part of ongoing cleanup efforts. Three types of contaminants have generally been detected in ground water beneath the Phibro-Tech, Inc. site: (a) dissolved metals; (b) non-chlorinated VOCs; and (c) chlorinated VOCs (see IRIS, 2008). Elevated concentrations of dissolved metals such as hexavalent chromium have consistently been detected in the vicinity of Pond 1, a Resource Conservation & Recovery Act (RCRA) regulated former surface impoundment area located in the center of the facility.

Well locations and ground water quality data for the Phibro-Tech, Inc. Site are provided in Section 3.1.5.

### **3.1.2 Regional Ground Water Impact**

The WRD, in cooperation with the United States Geological Service (USGS), has completed a ground water contamination study to assess the Central Basin threat of multiple contamination plumes in the area (see WRD, 2007). The Central Basin includes the cities of Whittier and Santa Fe Springs.

Several large scale releases such as the Omega Chemical Corporation facility in Whittier, a federal Superfund Site being overseen by EPA with a ground water plume known to extend over three miles, McKesson Chemical Corporation facility in Santa Fe Springs being overseen by DTSC, and Angeles Chemical Company, Inc. in Santa Fe Springs being overseen by DTSC, have resulted in regional ground water impacts to the area, which includes regional impacts to the Site. The chemicals of concern are PCE (primary chemical of concern), TCE and their breakdown products. TCE is a known breakdown product of PCE. Figure 10 depicts the regional PCE plume for the WRD Central Basin.

### **3.1.3 Soil Gas**

In February 2009, a soil gas survey was conducted for the West Parcel of the Site where a new building is proposed (see EAI, 2009C). Soil gas samples were obtained from 25 sample point locations at depths of 5 and 15 feet bgs (see Figures 4, 7 and 8). A total of 18 VOCs were detected in soil gas samples collected from beneath the Site (see Tables 6 and 7).

A human health screening evaluation was completed using the maximum concentrations of chemicals detected in soil gas at 5 and 15 feet bgs as exposure point concentrations. The results of the risk assessment indicate an incremental cancer risk below 10 per million which is typically considered acceptable for commercial development, and a hazard quotient below the threshold level of 1.0.

The Office of Environmental Health Hazard Assessment (OEHHA) reviewed the human health screening evaluation, and concluded in a Memorandum dated July 27, 2009, that the vapor intrusion risk and hazard estimates are conservative, reliable, and can support risk management decisions (see EAI, 2009D).

### **3.1.4 Soil**

For comparison purposes, the tables that summarize soil testing results include Soil Screening Levels (SSLs) based on use of RWQCB attenuation factor guidance (see RWQCB, 1996A and 1996B), California Human Health Screening Levels (CHHSLs) for residential land use and commercial/industrial land use (see Cal-EPA, 2005), and EPA Region 9 Screening Levels for Chemical Contaminants (SLCCs) at Superfund Sites for residential land use and commercial/industrial land use (see EPA, 2008). SSLs were developed by the RWQCB for

protection of ground water quality, and CHHSLs and SLCCs primarily for the protection of human health.

No chemicals were detected in soil at concentrations equal to or above cleanup levels established for the protection of human health based on an industrial-commercial land use, except arsenic. However, arsenic was determined to be present at background levels, and therefore, is not considered a chemical of potential concern (see EAI, 2009C).

Comparison of soil testing results with the SSLs indicate that there are five soil sampling areas/locations where residual hydrocarbons are present in soil above SSLs. These five sampling areas/locations and the proposed plan for each area, i.e., excavation and removal of soil or leave soil in-place, are listed below:

Year/Sample Location and Depth	Chemicals of Concern (mg/kg)	Proposed Action
1994: HA-1@2'	TPH-O@30,000	Excavate
1994: E-9@25' 1994: E-9@31' 2009: E-9A (soil between 5' and 70' is clean)	TRPH@15,600 TRPH@10,900	Leave in-Place
1994: B-7@25' 2009: B-7A@10' B-7A@20'	TPH-O@12,330 and PCE@0.51 TPH-D@16,800 and TPH-O@48,300 TPH-D@3,400 and TPH-O@12,300	Leave in-Place
1996: SS-4@2'	TPH-G@743 and TPH-D@3,590	Excavate
2009: Sample 4@15' 2009: Sample 4A (soil between 5' and 70' is clean)	TPH-D@4,940	Leave in-Place

Figure 11 is a cross-section location map through the area of the Site where hydrocarbons, i.e., TPH-D, TPH-O and PCE have been detected in soil above the RWQCB SSLs, and Figure 12 is the cross-section.

With the exception of locations HA-1 and SS-4, the other three locations (E-9/E-9A, B-7/B-7A and SAMPLE 4/SAMPLE 4A) have impacted soils at depths equal to or greater than 10 feet bgs, and therefore, will not be disturbed as part of the future redevelopment (warehouse) proposed for the Site. Given the fact that heavy end petroleum hydrocarbons are the chemical of concern for these three areas, i.e., only PCE was detected at 0.51 mg/kg for sample location B-7@25' and this was in 1994, over 14 years ago, and no PCE was detected above the SSL in samples collected in 2009, and no TPH-G, and TPH-D has been detected in ground water from well MW-1D, it is proposed to leave these deep soils for locations E-9/E-9A, B-7/B-7A and SAMPLE 4/SAMPLE 4A in-place (see Figure 13). It is important to note that these two areas are also outside the footprint of the proposed new building and will be in an area used for parking was development is completed.

### 3.1.5 Ground Water

Only two of the four wells associated with the Site contain ground water, i.e., well MW-1D at 74.72 feet bgs and well MW-4 at 76.51 feet bgs. Shallow ground water wells MW-2 and MW-3 are dry. Data from two well points are insufficient to determine the ground water flow direction beneath the Site. However, using ground water elevation data from the Phibro-Tech, Inc. Site and Pilot Chemical Company Site indicates a westerly ground water flow direction beneath the Site, which is consistent for the area.

Ground water quality data for the Site from January 2010 were compared to the most recent data available to EAI for the Phibro-Tech, Inc. Site (July 2009) and Pilot Chemical Company Site (October 2008). Ms. Kathy San Miguel of the DTSC provided EAI with the data for the Phibro-Tech, Inc. Site, and Mr. Henry Jones of the RWQCB for the Pilot Chemical Company Site. Table 9 compares the PCE and TCE concentrations present in ground water beneath the three properties.

Data from this comparison indicates that the highest concentrations of PCE and TCE are present beneath the Phibro-Tech, Inc. Site and the Pilot Chemical Company Site, followed by the Site. The maximum PCE concentrations beneath the Phibro-Tech, Inc. Site, Pilot Chemical Company Site, and Site are 130 ug/L, 28 ug/L and 20 ug/L, respectively (see Figure 14).

It is important to note that: (a) the most up-gradient well (MW-11) associated with the Pilot Chemical Company Site contains a PCE concentration of 28 ug/L, which exceeds, but is similar to the PCE concentration of 20 ug/L detected in the most down-gradient well (MW-4) associated with the Site. Both these concentrations appear to be within the background range known to be present in ground water for the region; and (b) data from well MW-1D installed at the Site in the area where the highest levels of contaminants have been detected in soil beneath the Site contains PCE at 6.07 ug/L, TCE at 3.89 ug/L and no detectable concentrations of TPH-G or TPH-D.

### 3.1.6 Institutional Controls

A deed restriction will be required for the Site that limits development at the Site to industrial, commercial or office space, and preclude residences for human habitation, hospitals, schools for persons under 21 years of age, and day care centers for children or senior citizens.

## 3.2 RECOMMENDATIONS

The shallow impacted soils associated with locations HA-1 and SS-4 will be excavated and removed from the Site. Excavation efforts, air monitoring, confirmation soil sampling, analytical testing, backfilling and compaction of the excavated areas, and reporting will be completed as outlined in the EAI Work Plan (see EAI, 2003) and EAI Work Plan Addendum (see EAI, 2009A) prepared for the Site.

#### 4.0 REQUEST

EAI is requesting that the RWQCB concur that no further action is required for the residual hydrocarbon concentrations remaining in soil at depths equal to or greater than 10 feet bgs at locations E-9, B-7 and SAMPLE 4. Upon receipt of this approval, the shallow impacted soil at locations HA-1 and SS-4 will be excavated and removed from the Site (see Section 3.2).

A final report documenting the removal and disposal of soil from these two locations HA-1 and SS-4, and manifests documenting disposal of this and other impacted soil that is presently stockpiled on-site from prior remedial work, will be submitted.

Another round of Ground water samples will be collected from all wells associated with the Site in April 2010 and analyzed for TPH-G, TPH-D, and VOCs.

## 5.0 LIMITATION

Our professional services have been performed using that degree of knowledge, diligence, care and skill ordinarily exercised, under similar circumstances, by reputable environmental consultants practicing in this or similar localities at this time. EAI assumes that information provided by third parties is true, accurate and reliable. This report has been prepared for Mr. Larry Patsouras. Use of this report by any other party shall be at such party's sole risk. The findings and conclusions contained in this report are based on information contained and/or referenced herein, and our best judgment. No other warranty, expressed or implied, is made as to the professional advice contained in this report.

Respectfully submitted,

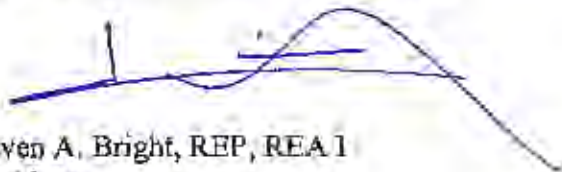

ENVIRONMENTAL AUDIT, INC.

### Definition 10.1

Only those VOCs detected are listed  
 < = Not detected at laboratory reporting limit listed  
 NA = Not analyzed for this chemical  
 ND = Not detected  
 NE = Not established  
 (al) = Sample was also analyzed for PCBs and SVOCs. No PCBs or SVOCs were detected  
 SSL = Los Angeles RWQCB Soil Screening Levels - Guidance for VOC-Impacted Sites (March 1996) and Petroleum-Impacted Sites (May 1996)  
 SLCC-R = EPA Region 9 - "Screening Level for Chemical Contaminants at Superfund Sites" - Residential Land Use (September 2008)  
 SLCC-I = EPA Region 9 - "Screening Level for Chemical Contaminants at Superfund Sites" - Commercial/Industrial Land Use (September 2008)  
 CHHSL-R = Cal-EPA - "California Human Health Screening Levels in Evaluation of Contaminated Properties" - Residential Land Use (January 2005)  
 CHHSL-I = Cal-EPA - "California Human Health Screening Levels in Evaluation of Contaminated Properties" - Commercial/Industrial Land Use (January 2005)  
 I = Estimated concentration  
 U.S.L. = Concentration detected exceeds SSL. However, soil was excavated as part of decontamination efforts completed by BEA in 2006  
 D.C.L. = Concentration detected exceeds SSL

TPH-G = Total Petroleum Hydrocarbons as Gasoline  
 TPH-D = Total Petroleum Hydrocarbons as Diesel  
 TPH-O = Total Petroleum Hydrocarbons as Oil  
 TPH = Total Recoverable Petroleum Hydrocarbons

TCE = Trichloroethene  
 PCE = Tetrachloroethene  
 TCRM = Trichlorofluoromethane  
 MEK = Methyl Ethyl Ketone (3-Butanone)

1,2,3-TCP = 1,2,3-Trichloropropane  
 1,2,4-TMB = 1,2,4-Trimethylbenzene  
 1,3,5-TMB = 1,3,5-Trimethylbenzene

Project: 1576 / Burke Street  
Lab I.D.: 091208-3 through -19

Dear Mr. Mecham:

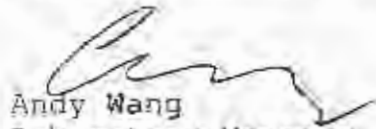

The **analytical results** for the soil samples, received by our laboratory on December 8, 2009, are attached. The samples were received chilled, intact, and accompanying chain of custody.

Enviro-Chem appreciates the opportunity to provide you and your company this and other services. Please do not hesitate to call us if you have any questions.

Sincerely,

Curtis Desilets  
Vice President/Program Manager

Andy Wang  
Laboratory Manager

Eric Lu, Ph.D.  
Chief Chemist

Dear Mr. Mecham:

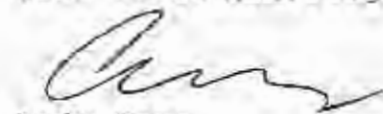

The **analytical results** for the soil samples, received by our laboratory on December 8, 2009, are attached. The samples were received chilled, intact, and accompanying chain of custody.

Enviro-Chem appreciates the opportunity to provide you and your company this and other services. Please do not hesitate to call us if you have any questions.

Sincerely,

Curtis Desilets

Dear Mr. Mecham:

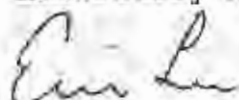

The **analytical results** for the soil samples, received by our laboratory on December 10, 2009, are attached. The samples were received chilled, intact, and accompanying chain of custody.

Enviro-Chem appreciates the opportunity to provide you and your company this and other services. Please do not hesitate to call us if you have any questions.

Sincerely,

  
Curtis Desilets  
Vice President/Program Manager

  
Andy Wang  
Laboratory Manager

  
Eric Lu, Ph.D.  
Chief Chemist

Dear Mr. Mecham:

The **analytical results** for the water samples, received by our laboratory on January 5, 2010, are attached. The samples were received chilled, intact, and accompanying chain of custody.

Enviro-Chem appreciates the opportunity to provide you and your company this and other services. Please do not hesitate to call us if you have any questions.

Sincerely,

Curtis Desilets  
Vice President/Program Manager

Andy Wang
